

Designed to outrun the wind, the road, and its competitors, the Trident is a fusion of aerospace materials, cutting edge manufacturing technology, and old-world craftsmanship that yields a triathlon workhorse.

The Trident is celebrated for its ability to translate power into speed, and grueling roads into plush rides. Painstakingly crafted by hand with our patented techniques, the Trident continues to redefine the industry's notion of lateral stiffness and vertical compliance. With nimble handling, smooth performance, and exceptional comfort, you may never want to come home.

"This Trident is simply amazing . . . the weight and comfort of the carbon fiber blows me away. I actually find myself looking for cracks in the road to run over! And the thing is just a rocket! Every mile on my Aegis confirms that this is the best bike I have ever ridden."

-R.L.
